

ADIBA TIRANDAZ

Senior Angular Developer | Frontend Architecture & UI Engineering | 6+ Years Experience

Pune, India · Open to Remote | tirandazadiba1@gmail.com | +91 98901 64647 | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Senior Frontend Engineer with 6+ years specializing in Angular (16/17+, RxJS, NgRx, Signals, Standalone Components), building enterprise-scale, high-performance web applications across fintech, IoT, and SaaS domains. Proven track record architecting reusable component libraries, implementing RBAC/ReBAC security models, and driving measurable performance gains through OnPush change detection, lazy loading, and code-splitting strategies. Experienced technical lead and Scrum Master with a history of mentoring engineers, owning architecture decisions end-to-end, and delivering production systems used by 200+ internal and external users. Experienced in building scalable, maintainable frontend architectures and delivering business-critical applications in Agile environments.

CORE TECHNICAL SKILLS

Angular: Angular 16/17+, RxJS (switchMap, takeUntil, combineLatest, BehaviorSubject), NgRx, Signals, Standalone Components, Angular Material, PrimeNG, Angular CLI

Frontend: React 18, TypeScript, JavaScript (ES6+), HTML5, CSS3, Responsive Design, CSS Grid, Flexbox

Performance & Architecture: OnPush Change Detection, Lazy Loading, Preloading Strategies, trackBy, Tree Shaking, Component-Driven Architecture, Reusable Component Libraries, Scalable Frontend Architecture

APIs & Security: REST APIs, JWT, OAuth 2.0, RBAC, ReBAC, Node.js, Express.js

Testing & Quality: Cypress, Jasmine, Karma, Cross-Browser Testing, Code Reviews

DevOps & Tools: Git, GitHub, Bitbucket, CI/CD Pipelines, AWS EC2, Nginx, Vercel, Netlify, Jira

Supporting Backend: PHP, CodeIgniter, Python Flask, Firebase, MongoDB

Process & Leadership: Agile/Scrum Master, Sprint Planning, Stakeholder Communication, Cross-Functional Collaboration, Team Mentoring

Design Collaboration: Figma (UI/UX Design, Prototyping, Design Systems)

AI & Emerging Tools: AI-Assisted Development, Generative AI Tools, Prompt Engineering, AI Workflow Integration

PROFESSIONAL EXPERIENCE

Freelance Frontend Developer — Angular & React | Self-Employed Apr 2025 – Present

- Delivering production-ready Angular and React applications for clients across multiple domains, owning architecture, component design, and deployment end-to-end.
- Architecting standalone-component-based Angular solutions and applying Signals for state management on new builds, staying current with the latest Angular release patterns.
- Collaborating directly with clients on requirements, technical scoping, and delivery timelines, acting as sole frontend architect on each engagement.
- Designing UI/UX in Figma from wireframes to high-fidelity prototypes, ensuring close design-to-development fidelity on every build.
- Built and published a full portfolio site demonstrating Angular and React engineering capability, including a live product demo with modal video playback.
- Upskilling in AI-assisted development workflows, integrating generative AI tools into the engineering process to accelerate delivery.

Software Engineer II — Frontend Lead | Ironalytics Apr 2023 – Apr 2025

- Architected and delivered a large-scale Angular 16+ enterprise dashboard — dynamic tables, inline editing, custom filters, and multi-step approval workflows — serving 200+ internal users across operations and finance.
- Built a reusable Angular component library (modals, alerts, dropdowns, loaders) adopted across 8+ modules, reducing code duplication by ~40% and eliminating UI inconsistencies between teams.
- Improved load performance on data-heavy views by implementing OnPush change detection, lazy loading, preloading strategies, and trackBy across the application, reducing unnecessary re-renders application-wide.

- Designed and implemented RBAC with JWT-secured login flows, threshold-based alert systems, and role-specific views across all user tiers.
- Authored Node.js automation scripts for bulk data processing, cutting manual reporting effort by several hours per sprint cycle.
- Managed and mentored 2 junior developers — assigned tasks, conducted structured code reviews, and raised Angular/TypeScript proficiency across the team within 3 months.
- Acted as Scrum Master for all sprint ceremonies (planning, stand-ups, retros, demos) and served as primary client point of contact throughout the engagement.

Software Developer → Informal Tech Lead | *Broadstairs IT Solutions* Feb 2019 – Jun 2022

- Progressed from developer to informal tech lead within 3 years, owning 4+ international client projects end-to-end — requirements, frontend architecture, API integration, deployment, and client sign-off.
- Delivered cross-browser, pixel-perfect Angular and React frontends for clients in the UK and Middle East, consistently passing UAT on first submission.
- Integrated REST APIs with JWT authentication and enforced secure coding practices across all client projects, with zero security incidents reported post-launch.
- Led daily Scrum ceremonies, managed Jira boards, and presented sprint demos directly to international clients, effectively acting as both tech lead and delivery manager on smaller engagements.
- Mentored 2–3 junior developers through structured code reviews and pair programming sessions, reducing bug rates on shared modules by an estimated 30%.

KEY PROJECTS

PIL — Enterprise Pipeline Management — *Angular 16+, NgRx, RxJS, REST APIs, Angular Material*

- End-to-end Angular frontend for a high-volume pipeline operations dashboard — dynamic tables, multi-step assignment workflows, escalation triggers, and approval chains.
- Delivered a shared component library across 8+ modules and achieved measurable performance gains via OnPush change detection and lazy loading.

Bridge Monitoring & Maintenance System — *Angular, WebSockets, IoT, ReBAC*

- Real-time IoT dashboard tracking structural metrics (vibration, temperature, stress) via WebSocket streams with dynamic chart visualisations.
- Implemented relation-based access control (ReBAC), threshold alert logic, and secure login flows for field engineers and administrators.

Sorted — Priority Productivity Tool — *Angular, Python Flask*

- Priority-based daily planner with drag-and-drop rescheduling, custom calendar, productivity dashboards, and CSV export for power users.

Pantomah — School Management Platform — *Angular, Python Flask, Firebase*

- Role-specific dashboards for admins, teachers, and students with Firebase real-time updates, push notifications, and offline resilience.

MEMONID — *Angular, Node.js, MongoDB, AWS EC2, Nginx, Serverless*

- Full-stack mobile app: configured EC2 with Nginx/SSL for initial launch, then led a zero-downtime migration to a serverless architecture, reducing infrastructure cost by ~60%.

CERTIFICATIONS

Introduction to Front End Development — Meta / Coursera, Jun 2026 · Credential: 10312784

EDUCATION

M.Sc. Computer Science — Savitribai Phule Pune University, 2018 – 2020

B.Sc. Computer Science — Savitribai Phule Pune University, 2015 – 2018
